

## #711 Projib Arm

The Miller Projib jib arm frees you from the limitations of single point-of-view shooting by adding a third dimension to your shot selection. For example, a pan and tilt head gives you horizontal and vertical motion from a fixed axis, while the projib pans, tilts and tracks, to let you change your point-of-view. This is great for rehearsing the best position for 'pack shot' or 'table-top' shooting, the dramatic tracking effects must be seen to be believed. Imagine tracking from ground level in a forest stream up to over 2 meters in height in a single movement!
